Explanatory Notes

AN OVER-THE-MONTH RISE OF 15,100 IN NONFARM WORKERS OCCURRED BETWEEN MID-MARCH AND MID-APRIL 1983

THE UPWARD TREND IN NONAGRICULTURAL EMPLOYMENT DURING APRIL 1983 WAS A WELCOMED INDICATION OF AN IMPROVED ECONOMY IN VIRGINIA. The over-the-month rise of 15,100 workers was widespread and the only major industry division to have fewer workers on their payrolls in April was the government sector. While much of the worker upswing was seasonal and tourist-related, the manufacturing division's increase was particularly profitable to the overall conduct of employment. When comparing April 1983 figures with those for April 1982, worker totals have improved by 4,600 over the year. Although weakness continues in some industrial and geographical areas of the state, April's increase indicates an improvement in the overall outlook of Virginia's economy.

DURING APRIL 1983 CONSTRUCTION EMPLOYMENT ROSE BY 4,500 TO 99,500. This equaled construction's year-ago levels and was only the second month since early 1979 that current employment was not below the previous year's employment. All phases of the construction industry contributed to the uptrend. Even with stubbornly high interest rates, indications of bouyance prevailed as new work on homes and public works provided strength for contractors. The rise in the financial sector was linked to construction as real estate agencies added to their payrolls. Increased mortgage requests boosted business in both sectors.

THE RISE OF 2,800 IN MANUFACTURING INDUSTRIES BETWEEN MARCH AND APRIL WAS UPLIFTING TO PRODUCERS OF MANY KINDS OF GOODS. Among softgoods manufacturers increases of 500 in chemicals, 400 in textiles and 300 in apparel were posted, while both food and tobacco were up by 200 each. Hardgoods producers recorded a plus 1,200 over the month. The largest increase in this group was in transportation equipment (+700) as work on naval contracts continued to expand. Increases in the demand for lumber products, furniture and building materials prompted firms to use more workers in the production of these items. Even with these healthy gains, employment remained below the year-ago total for manufacturing. Virginia's 297,100 factory production workers earned $301.78 in April 1983. This was 74 cents more than in March of this year and $23.75 more than last April. Average hourly earnings declined by two cents over the month to $7.64 but they were 28 cents ahead of a year ago. The average workweek rose between March and April two-tenths of an hour to 39.5 hours. This was 1.7 hours longer than the average for April 1982. Among the major metropolitan areas, all recorded employment increases. However, hours and earnings trends were mixed.

SERVICES AND TRADE HAD A COMBINED INCREASE IN EMPLOYMENT OF 7,700 PERSONS. A great deal of the business generated by both segments was geared toward tourism. Many festivals, shows and cultural events were planned and helped to lure people out to relax and enjoy. Theme parks opened during late March and many seasonal workers

Current month's estimates are preliminary. Estimates include all full-time and part-time wage and salary workers who worked during or received pay for the pay period including the twelfth of the month. Self-employed persons are excluded. Employment series have been adjusted to first quarter 1982 benchmark levels.

NOTE: Detail may not add to totals because of rounding.

AN OVER-THE-MONTH RISE OF 15,100 IN NONFARM WORKERS OCCURRED BETWEEN MID-MARCH AND MID-APRIL 1983

(continued from page 1)

were added. Recent improvements in labor markets point to an improved tourist season. The big gainer among trade establishments was restaurants as eating and drinking places in resort areas added to their staffs. Fast-food stores continue to open in many parts of the Commonwealth. Despite a decline in personnel in department stores, merchants are seeing customers buying more discretionary items and not just necessities.

GOVERNMENT WORKFORCES MOVED DOWNWARD BY 1,100 to 503,700. Federal, state and local agencies had over-the-month drops. Over the year an erosion of 1,400 jobs has occurred on government payrolls. Transportation and public utilities registered small but widespread gains. In the mining division the minimal rise of one hundred was the first monthly increase since April 1982. The over-the-year decline of 4,100 in mining indicates to some degree the problems of the industry.

THE BUREAU OF LABOR STATISTICS' ALL URBAN CONSUMER PRICE INDEX for April 1983 was 295.5 (1967=100). This was a monthly rise of 0.7 percent and a yearly gain of 3.9 percent. The Urban Wage Earners and Clerical Workers Index rose 0.6 percent to 294.9 (1967=100). The over-the-year increase was 3.9 percent.

Index figures for May 1983 will be available on June 22, 1983 and may be obtained by calling (804) 786-4490.

Current month's estimates are preliminary. Average hourly earnings are computed on a gross basis and are affected by such factors as premium pay for overtime work and shift differential, as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of average weekly hours and average hourly earnings.

EXPLANATORY NOTES

This release presents and analyzes statistics from the Current Employment Statistics Survey. Data on nonagricultural payroll employment, hours and earnings are collected by the Virginia Department of Labor and Industry in cooperation with the U. S. Bureau of Labor Statistics, from payroll records of a sample of approximately 7,000 establishments. In most industries the sampling probabilities are based on the size of the establishment; most large establishments are therefore in the sample. Self-employed persons, domestic workers and others not on a regular civilian payroll are outside the scope of the survey because they are excluded from establishment records.

Definitions:

Employed persons are all persons who received pay (including holiday and sick pay) for any part of the payroll period including the 12th of the month. Persons holding more than one job are counted in each establishment which reports them. From a sample composed of establishments reporting for both the previous and the current months, the ratio of current employment to that of the previous month is computed. This is called a link relative. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these link relatives.

Production workers in manufacturing include blue-collar worker supervisors and all nonsupervisory workers closely associated with production operations.

Hours represent the average weekly hours of production or nonsupervisory workers for which pay was received and is different from standard or scheduled hours. Such factors as unpaid absenteeism, labor turnover, part-time work and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect changes in the workweek of component industries.

Earnings are the payments production or nonsupervisory workers receive during the survey period, including premium pay for overtime or late-shift work but excluding irregular bonuses and other special payments. Average hourly earnings are on a gross basis, reflecting not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. Shifts in the volume of employment between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Benchmark Adjustments. Employment estimates are compared periodically with comprehensive counts of employment which provide "benchmarks" for the various nonagricultural industries, and appropriate adjustments are made. The primary sources of benchmark information are employment data, by industry, compiled quarterly by the Virginia Employment Commission from reports of establishments covered under the unemployment insurance laws.

Reliability of employment estimates. The BLS establishment sample covers approximately 42.1 percent of the total employment for the state. Since small sampling and response errors cumulate over several months, there was a minus 1.4 percent adjustment in benchmark levels for the first quarter 1982 benchmarks.

Seasonal Adjustments. Nearly all economic phenomena are affected to some degree by seasonal variations. These are recurring, predictable events which are reported more or less regularly each year. The cumulative effects of these events are often large. Since seasonal variations tend to be large relative to the underlying cyclical trends, it is necessary to use seasonally adjusted data to interpret short-term economic developments. Seasonally adjusted estimates of total employment and average weekly hours of production workers in the manufacturing industies are published in this release for the State of Virginia. The seasonal aijustment methods used for these series are an adaptation to the standard ratio-to-moving average method, with a provision for moving "adjustment factors" to take account of changing seasonal patterns.

Labor force and unemployment estimates for the State and standard metropolitan statistical areas are developed by the Virginia Employment Commission under a Federal-State cooperative program. Estimates are derived from standardized procedures developed by the Bureau of Labor Statistics.

Explanatory Notes

NONAGRICULTURAL EMPLOYMENT IN VIRGINIA FORGED AHEAD BY 18,200 OVER THE MONTH

AN INCREASE OF 18,200 WORKERS BETWEEN APRIL 1983 AND MAY 1983 IN VIRGINIA WAS POSTED. All major industry divisions (except mining) had over-the-month uptrends. Indications of an improved economy were reflected by the current May figure being 15,600 higher than the count was during May 1982. An improved construction industry, seasonal tourist activity, and inventory buildups by manufacturers helped to boost employment to its highest level since late 1981. Employment was enhanced further by increases in government employment at the federal and local levels.

MANUFACTURING EMPLOYMENT EXPERIENCED A PICKUP OF 2,000 EMPLOYEES BETWEEN THIS YEAR'S APRIL AND MAY SURVEY PERIODS. Nondurable goods producers showed a monthly loss of workers due to seasonal aspects of the food and tobacco industries. Layoffs by stemming and redrying plants, along with seafood processors, accounted for most of this decline. Although the textile segment had an increase of 300 workers the rest of the changes in the nondurable goods segment were smaller in scope. Durable goods was the bright spot in manufacturing with the spotlight focused on the transportation equipment and lumber portions of the division. New contracts for shipbuilding and repair work and increased demands from the builders helped to strengthen employment in these areas. While the machinery segment remains somewhat soft with a workforce well below year-ago totals, it, nevertheless, was able to hold steady over the month. Virginia's 298,800 factory production workers earned an average of $306.09 in May 1983. This was $3.52 more than in the previous month and $23.58 higher than a year earlier. Average hourly earnings rose five cents over the month to $7.71. A yearly rise of 41 cents was recorded. The average workweek continued to expand and was 39.7 hours in May. The monthly increase was two-tenths of an hour, while the yearly rise was one hour. Hourly earnings rose in all of the metropolitan areas, with trends in the average workweek being mixed.

THE CONSTRUCTION AND FINANCE SEGMENTS OF THE ECONOMY COMBINED TO RAISE EMPLOYMENT BY 6,300 PERSONS. The construction industry moved forward as good weather permitted new projects to get under way. All major divisions of construction were in the plus column during May. Home-building permits continued to grow solidly, suggesting increased activity for the summer months. Increased gains in used-home sales have broadened the new-home market. Real estate agencies were experiencing an upsurge in their business and numerous workers were added to their staffs. Further declines in interest rates would provide added stimulus to both construction and finance.

THE LARGEST OVER-THE-MONTH RISE OCCURED IN THE TRADE DIVISION (+4,900), WITH SERVICES (+3,300) NOT FAR BEHIND. Retailers added to their payrolls as sales improved. Consumer optimism has been on the rise and even automobile sales have shifted into a higher gear. Eating

Current month's estimates are preliminary. Estimates include all full-time and part-time wage and salary workers who worked during or received pay for the pay period including the twelfth of the month. Self-employed persons are excluded. Employment series have been adjusted to first quarter 1982 benchmark levels.

NOTE: Detail may not add to totals because of rounding.

NONAGRICULTURAL EMPLOYMENT IN VIRGINIA FORGED AHEAD BY 18,200 OVER THE MONTH

(continued from page 1)

and drinking places, particularly in the resort areas, reported significant increases in employment as the tourist season began. Many service businesses that rely on tourism added workers as the beach areas and amusement and theme parks readied for the summer months. The only significant deterrent to the services segment was the release of temporary workers hired by firms that assist taxpayers with their returns.

GOVERNMENT, WHICH COMPRISES 23 PERCENT OF NONAGRICUTURAL EMPLOYMENT IN VIRGINIA, ROSE 2,000 IN MAY TO 506,400. The bulk of this plus was in federal government and primarily in defense agencies. Local government also registered an uptrend in worker totals, with increases being small but widespread. State government was the only level of public employment to record a downtrend between April and May. Gains in the transportation and public utilities division were scattered. Trucking and warehousing firms had the largest input to the increase. The mining industry continues to have difficulties with further employment losses.

THE BUREAU OF LABOR STATISTIC'S ALL URBAN CONSUMERS PRICE INDEX IN MAY 1983 WAS 297.1 (1967=100). The over-the-month increase was 0.5 percent and the yearly rise was 3.5 percent. The Urban Wage Earners and Clerical Workers Index was 296.3 (1967=100) in May of this year. The monthly rise was also 0.5 percent, while the over-the-year increase was 3.4 percent.

June 1983 data will be released on July 22, 1983 and may be obtained by calling 804-786-4490.

Current month's estimates are preliminary. Average hourly earnings are computed on a gross basis and are affected by such factors as premium pay for overtime work and shift differential, as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of average weekly hours and average hourly earnings.

EXPLANATORY NOTES

This release presents and analyzes statistics from the Current Employment Statistics Survey. Data on nonagricultural payroll employment, hours and earnings are collected by the Virginia Department of Labor and Industry in cooperation with the U. S. Bureau of Labor Statistics, from payroll records of a sample of approximately 7,000 establishments. In most industries the sampling probabilities are based on the size of the establishment; most large establishments are therefore in the sample. Self-employed persons, domestic workers and others not on a regular civilian payroll are outside the scope of the survey because they are excluded from establishment records.

Definitions:

Employed persons are all persons who received pay (including holiday and sick pay) for any part of the payroll period including the 12th of the month. Persons holding more than one job are counted in each establishment which reports them. From a sample composed of establishments reporting for both the previous and the current months, the ratio of current employment to that of the previous month is computed. This is called a link relative. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these link relatives.

Production workers in manufacturing include blue-collar worker supervisors and all nonsupervisory workers closely associated with production operations.

Hours represent the average weekly hours of production or nonsupervisory workers for which pay was received and is different from standard or scheduled hours. Such factors as unpaid absenteeism, labor turnover, part-time work and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect changes in the workweek of component industries.

Earnings are the payments production or nonsupervisory workers receive during the survey period, including premium pay for overtime or late-shift work but excluding irregular bonuses and other special payments. Average hourly earnings are on a gross basis, reflecting not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. Shifts in the volume of employment between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Benchmark Adjustments. Employment estimates are compared periodically with comprehensive counts of employment which provide "benchmarks" for the various nonagricultural industries, and appropriate adjustments are made. The primary sources of benchmark information are employment data, by industry, compiled quarterly by the Virginia Employment Commission from reports of establishments covered under the unemployment insurance laws.

Reliability of employment estimates. The BLS establishment sample covers approximately 42.1 percent of the total employment for the state. Since small sampling and response errors cumulate over several months, there was a minus 1.4 percent adjustment in benchmark levels for the first quarter 1982 benchmarks.

Seasonal Adjustments. Nearly all economic phenomena are affected to some degree by seasonal variations. These are recurring, predictable events which are reported more or less regularly each year. The cumulative effects of these events are often large. Since seasonal variations tend to be large relative to the underlying cyclical trends, it is necessary to use seasonally adjusted data to interpret short-term economic developments. Seasonally adjusted estimates of total employment and average weekly hours of production workers in the manufacturing industies are published in this release for the State of Virginia. The seasonal adjustment methods used for these series are an adaptation to the standard ratio-to-moving average method, with a provision for moving "adjustment factors" to take account of changing seasonal patterns.

Labor force and unemployment estimates for the State and standard metropolitan statistical areas are developed by the Virginia Employment Commission under a Federal-State cooperative program. Estimates are derived from standardized procedures developed by the Bureau of Labor Statistics.

Explanatory Notes

NONFARM EMPLOYMENT ROSE 22,800 IN JUNE 1983
ALL MAJOR INDUSTRIES CONTRIBUTED

NONAGRICULTURAL EMPLOYMENT IN VIRGINIA ROSE TO 2,174,100 IN JUNE 1983. This was 22,800 above the prior month's level and 25,900 more than in the previous year. June's gains were widespread with every major industry division recording some increase in worker totals over the month. The largest increments were in manufacturing (+5,100) and services (+4,700). Government, trade, and construction combined for an increase of 10,600, while finance, transportation, and mining jointly rose 2,400. Although some geographic areas of the state lag behind the general economic uptrend, the overall employment outlook was greatly improved during the June 1983 survey period.

THE RENEWED STRENGTH OF THE MANUFACTURING SECTOR HAD A MOST BENEFICIAL IMPACT ON EMPLOYMENT IN JUNE 1983. Both durable and nondurable goods producers shared almost equally in the upswing. The transportation equipment industry's increase was more than any of the other manufacturing segments. Hiring of youths for the summer months accounted for much of the May to June pickups. Orders for all types of building products were received and employment accelerated. Demand was up for electrical goods and fabricated metal products. The machinery sector also recorded a modest rise in its workforce. The processing of fruits and vegetables prompted the hiring of temporary workers for the summer months. Increases in textiles and apparel were not great in magnitude but were widespread. The lengthening of the average workweek for Virginias 305,000 factory production workers in June was indicative of an improved economy. The workweek at 40.4 hours in June was nine-tenths of an hour longer than in May and 1.2 hours more than a year ago. Although average hourly earnings declined three cents to $7.68 between May and June, this nevertheless compared favorably with the June 1982 average of $7.30. Average weekly earnings at $310.27 in June were up $5.72 over the month and up $24.11 over the year. Hours and earnings trends were varied in the metropolitan areas.

SERVICES EMPLOYMENT TOTAL WAS BOOSTED BY 4,700 PERSONS. A large part of the industry caters to tourism and since the current season was getting into full swing, many hotels, motels, amusement centers and recreational areas added workers for the summer. Travel promoters across the state were luring visitors with a variety of new attractions. Norfolk's Waterside marketplace is just one example of the many new options open to tourists. This project helped to raise trade employment as approximately one hundred new restaurants and shops opened. Trade establishments in the resort areas added substantially to their payrolls in June. Restaurants, particularly fast-food establishments, recorded good increases to their staffs. Improved unemployment has helped consumer confidence to rise and retail sales improved.

CONSTRUCTION EMPLOYMENT, AT 107,400, WAS UP 3,400 OVER MAY 1983 AND UP 4,300 OVER A YEAR AGO. The construction workforce

Current month's estimates are preliminary. Estimates include all full-time and part-time wage and salary workers who worked during or received pay for the pay period including the twelfth of the month. Self-employed persons are excluded. Employment series have been adjusted to first quarter 1982 benchmark levels.

NOTE: Detail may not add to totals because of rounding.

NONFARM EMPLOYMENT ROSE 22,800 IN JUNE 1983 ALL MAJOR INDUSTRIES CONTRIBUTED

(continued from page 1)

has not reached its current level since late 1981. Good weather permitted work to advance at most sites. As in May, all major divisions of the industry had more workers on jobs. The number of home sales rose and financial institutions and real estate agencies needed to increase their staffs.

THE GOVERNMENT LABOR FORCE MOVED UPWARD BY 3,700 PEOPLE TO 510,500 IN JUNE 1983. The rise of 2,200 over May in federal government was centered primarily in defense operations and in agencies that hire students for the summer months. Local government also recorded increased payrolls as outdoor recreational and youth work programs got under way. State government continued to show a downtrend (-700 over the month and -1,100 over the year). The only other major divisions to remain below year-ago levels were the mining and the transportation and public utilities segments. While June's increases in transportation (+400) and mining (+300) were not as great or impressive as in other parts of the economy, they nevertheless, provided another positive note to the economic upbeat for Virginia.

THE U. S. DEPARTMENT OF LABOR'S BUREAU OF LABOR STATISTICS' ALL URBAN CONSUMER PRICE INDEX (CPI-U) WAS 298.1 (1967=100) IN JUNE 1983. This was 0.3 percent more than May 1983 and 2.6 percent over June 1982. The Urban Wage Earners and Clerical Workers Index (CPI-W) in June 1983 was 297.2 (1967=100). The monthly rise was 0.3 percent and the yearly gain was 2.4 percent.

July 1983 data will be released on August 23, 1983, and may be obtained by call (804) 786-4490.

Current month's estimates are preliminary. Average hourly earnings are computed on a gross basis and are affected by such factors as premium pay for overtime work and shift differential, as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of average weekly hours and average hourly earnings.

Table C-2.

EXPLANATORY NOTES

This release presents and analyzes statistics from the Current Employment Statistics Survey. Data on nonagricultural payroll employment, hours and earnings are collected by the Virginia Department of Labor and Industry in cooperation with the U. S. Bureau of Labor Statistics, from payroll records of a sample of approximately 7,000 establishments. In most industries the sampling probabilities are based on the size of the establishment; most large establishments are therefore in the sample. Self-employed persons, domestic workers and others not on a regular civilian payroll are outside the scope of the survey because they are excluded from establishment records.

Definitions:

Employed persons are all persons who received pay (including holiday and sick pay) for any part of the payroll period including the 12th of the month. Persons holding more than one job are counted in each establishment which reports them. From a sample composed of establishments reporting for both the previous and the current months, the ratio of current employment to that of the previous month is computed. This is called a link relative. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these link relatives.

Production workers in manufacturing include blue-collar worker supervisors and all nonsupervisory workers closely associated with production operations.

Hours represent the average weekly hours of production or nonsupervisory workers for which pay was received and is different from standard or scheduled hours. Such factors as unpaid absenteeism, labor turnover, part-time work and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect changes in the workweek of component industries.

Earnings are the payments production or nonsupervisory workers receive during the survey period, including premium pay for overtime or late-shift work but excluding irregular bonuses and other special payments. Average hourly earnings are on a gross basis, reflecting not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. Shifts in the volume of employment between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Benchmark Adjustments. Employment estimates are compared periodically with comprehensive counts of employment which provide "benchmarks" for the various nonagricultural industries, and appropriate adjustments are made. The primary sources of benchmark information are employment data, by industry, compiled quarterly by the Virginia Employment Commission from reports of establishments covered under the unemployment insurance laws.

Reliability of employment estimates. The BLS establishment sample covers approximately 42.1 percent of the total employment for the state. Since small sampling and response errors cumulate over several months, there was a minus 1.4 percent adjustment in benchmark levels for the first quarter 1982 benchmarks.

Seasonal Adjustments. Nearly all economic phenomena are affected to some degree by seasonal variations. These are recurring, predictable events which are reported more or less regularly each year. The cumulative effects of these events are often large. Since seasonal variations tend to be large relative to the underlying cyclical trends, it is necessary to use seasonally adjusted data to interpret short-term economic developments. Seasonally adjusted estimates of total employment and average weekly hours of production workers in the manufacturing industies are published in this release for the State of Virginia. The seasonal adjustment methods used for these series are an adaptation to the standard ratio-to-moving average method, with a provision for moving "adjustment factors" to take account of changing seasonal patterns.

Labor force and unemployment estimates for the State and standard metropolitan statistical areas are developed by the Virginia Employment Commission under a Federal-State cooperative program. Estimates are derived from standardized procedures developed by the Bureau of Labor Statistics.

Explanatory Notes

NONFARM EMPLOYMENT DECLINED DURING JULY IN VIRGINIA

EMPLOYMENT IN NONAGRICULTURAL ESTABLISHMENTS ACROSS VIRGINIA DECLINED IN JULY 1983 TO 2,165,000 WORKERS. This was an over-the-month loss of 15,300. However, employment was 29,300 ahead of the July 1982 total. July's lower employment was not unusual since much of the downturn was caused by the release of nonteaching personnel and students who were employed during the school year. The government sector was the only major industry to report fewer workers between June and July. Increases in other segments reflected improvement in the economy, despite weakness in the mining division where employment lags behind the year-ago figure.

MANUFACTURING EMPLOYMENT ROSE 1,700 BETWEEN MID-JUNE AND MID-JULY 1983, TO 404,700. Offsetting trends left the nondurable goods division unchanged over the month. Many textile and apparel plants usually have closings for extended vacations in July. This year the number of workers on unpaid vacations was minimal. Durable goods producers recorded uptrends in most industrial divisions. Transportation equipment posted the largest increase as numerous hirings were made for the summer by shipbuilders. Producers of electrical equipment also used more workers. Demands by the construction industry prompted worker increases by firms that supply materials to builders. Approximately 75 percent of all manufacturing employees are production workers. These 306,700 workers earned an average $7.67 per hour in July 1983. This was a two cents over-the-month drop but a 31 cents over-the-year increase. The average workweek declined eight-tenths of an hour to average 39.7 hours in July. Absence of overtime due to vacations accounted for much of this change. However, the workweek averaged 1.2 hours longer than in July 1982. Average weekly earnings currently at $304.50 were down $6.95 over the month. Six of the major metropolitan areas followed the state's trend of fewer hours and less earnings, while the Danville, Northern Virginia, and Richmond Areas recorded more earnings and longer hours.

NONMANUFACTURING EMPLOYMENT DECLINED 17,000 TO 1,760,400. The number of government workers declined at all levels (federal, state, and local). Both state and local school systems released nonteaching personnel. Many of the students that worked for state colleges were not on payrolls during the summer. These downturns were partially counterbalanced by the hirings of youths in connection with summer work programs. Service establishments that cater to tourists added workers as the "season" was in full swing. The construction industry recorded a good over-the-month rise as new projects and good weather teamed together. Much of finance's uptrend was traced to more activity in real estate agencies. Trade, as well as transportation and public utilities, rose in July but to a lesser degree. Increases in the mining segment were very small and scattered.

Current month's estimates are preliminary. Estimates include all full-time and part-time wage and salary workers who worked during or received pay for the pay period including the twelfth of the month. Self-employed persons are excluded. Employment series have been adjusted to first quarter 1982 benchmark levels.

NOTE: Detail may not add to totals because of rounding.

NONFARM EMPLOYMENT DECLINED DURING JULY IN VIRGINIA

(continued from page 1)

THE VIRGINIA DEPARTMENT OF LABOR AND INDUSTRY ANNOUNCES THE PUBLICATION OF EMPLOYMENT, HOURS AND EARNINGS DATA FOR THE CHARLOTTESVILLE AND DANVILLE METROPOLITAN AREAS. (Employment data are available from January 1980 to present. Hours and earnings data begin January 1982.)

THE CHARLOTTESVILLE AREA is rather widely diversified in its nonagricultural employment. The largest segment of employment is government - 38 percent. Services and trade combine to make up 32 percent of the total, while 17 percent is in manufacturing. In 1980 the annual average employment was 54,500 and by 1982 the average had reached 55,300. Growth has been centered primarily in the services and government divisions. During 1982 average weekly earnings were $238.51. Hourly earnings averaged $6.26 and the workweek was 38.1 hours.

THE DANVILLE AREA averaged 40,500 persons on nonfarm payrolls in 1980 and by 1982 this average had declined to 38,600. About 47 percent of nonagricultural employment is in manufacturing and this segment has recorded the largest drop in employment since 1980. Trade makes up 19 percent, while services and government are 13 percent each. Downtrends over the 1980-1982 period were experienced by all but one of the major industrial sectors. Hourly earnings in the area averaged $6.76 for 1982. The average workweek was 39.0 hours. Average weekly earnings were $263.64 for 1982.

THE BUREAU OF LABOR STATISTIC'S ALL URBAN CONSUMERS PRICE INDEX IN July 1983 WAS 299.3 (1967=100). This was a monthly rise of 0.4 percent and a yearly gain of 2.4 percent. The Urban Wage Earners and Clerical Workers Index rose 0.3 percent to 298.2 (1967=100). The over-the-year increase was 2.2 percent.

Index figures for August 1983 will be available on September 23, 1983 and may be obtained by calling 804-786-4490.

Current month's estimates are preliminary. Average hourly earnings are computed on a gross basis and are affected by such factors as premium pay for overtime work and shift differential, as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of average weekly hours and average hourly earnings.

Table C-2.

EXPLANATORY NOTES

This release presents and analyzes statistics from the Current Employment Statistics Survey. Data on nonagricultural payroll employment, hours and earnings are collected by the Virginia Department of Labor and Industry in cooperation with the U. S. Bureau of Labor Statistics, from payroll records of a sample of approximately 7,000 establishments. In most industries the sampling probabilities are based on the size of the establishment; most large establishments are therefore in the sample. Self-employed persons, domestic workers and others not on a regular civilian payroll are outside the scope of the survey because they are excluded from establishment records.

Definitions:

Employed persons are all persons who received pay (including holiday and sick pay) for any part of the payroll period including the 12th of the month. Persons holding more than one job are counted in each establishment which reports them. From a sample composed of establishments reporting for both the previous and the current months, the ratio of current employment to that of the previous month is computed. This is called a link relative. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these link relatives.

Production workers in manufacturing include blue-collar worker supervisors and all nonsupervisory workers closely associated with production operations.

Hours represent the average weekly hours of production or nonsupervisory workers for which pay was received and is different from standard or scheduled hours. Such factors as unpaid absenteeism, labor turnover, part-time work and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect changes in the workweek of component industries.

Earnings are the payments production or nonsupervisory workers receive during the survey period, including premium pay for overtime or late-shift work but excluding irregular bonuses and other special payments. Average hourly earnings are on a gross basis, reflecting not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. Shifts in the volume of employment between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Benchmark Adjustments. Employment estimates are compared periodically with comprehensive counts of employment which provide "benchmarks" for the various nonagricultural industries, and appropriate adjustments are made. The primary sources of benchmark information are employment data, by industry, compiled quarterly by the Virginia Employment Commission from reports of establishments covered under the unemployment insurance laws.

Reliability of employment estimates. The BLS establishment sample covers approximately 42.1 percent of the total employment for the state. Since small sampling and response errors cumulate over several months, there was a minus 1.4 percent adjustment in benchmark levels for the first quarter 1982 benchmarks.

Seasonal Adjustments. Nearly all economic phenomena are affected to some degree by seasonal variations. These are recurring, predictable events which are reported more or less regularly each year. The cumulative effects of these events are often large. Since seasonal variations tend to be large relative to the underlying cyclical trends, it is necessary to use seasonally adjusted data to interpret short-term economic developments. Seasonally adjusted estimates of total employment and average weekly hours of production workers in the manufacturing industies are published in this release for the State of Virginia. The seasonal adjustment methods used for these series are an adaptation to the standard ratio-to-moving average method, with a provision for moving "adjustment factors" to take account of changing seasonal patterns.

Labor force and unemployment estimates for the State and standard metropolitan statistical areas are developed by the Virginia Employment Commission under a Federal-State cooperative program. Estimates are derived from standardized procedures developed by the Bureau of Labor Statistics.

Explanatory Notes

AUGUST NONFARM EMPLOYMENT IN VIRGINIA DECLINES

NONAGRICULTURAL EMPLOYMENT DECLINED 9,800 BETWEEN MID-JULY AND MID-AUGUST 1983 TO 2,152,800. Although the communication workers' strike temporarily reduced the total number of workers employed, there were other segments that did register increases. Despite almost 12,000 strikers being out of work, healthy gains were recorded by the construction industry and the trade segment, while modest rises were noted by manufacturing, mining and finance sections of the economy. The services and government divisions were in the minus column in August, a trend that was not unusual for either industry. When comparing August 1983 figures with August 1982, employment across the Commonwealth has improved by 18,600.

EVEN WITH COMMUNICATION WORKERS IN MANUFACTURING BEING AWAY FROM THEIR JOBS DUE TO A LABOR DISPUTE, EMPLOYMENT IN THE MANUFACTURING SECTOR ROSE 500 TO 404,400 IN AUGUST. In the durable goods division employment trended down as the strike began at the beginning of the August survey period. However, the decline was softened by increases made by lumber and furniture producers. Both primary and fabricated metal products plants needed more persons on payrolls to keep pace with orders. Nondurable goods producers recorded increases in textiles, apparel, chemicals, paper, printing and petroleum products. While a few of the rises were due to the return to work of employees after unpaid vacations in July, most were due to increased business. The hiring of temporary seasonal workers by tobacco stemming and redrying plants also boosted employment. Virginia's extremely dry summer will probably reduce the number of people needed to process this year's tobacco crop. The effects of the drought were felt in the food and kindred products segment as a much smaller than normal yield is being realized. During August 1983 Virginia's 305,800 factory production workers earned an average weekly earning of $310.38. This was $3.94 more than the July 1983 average and $24.84 more than August a year ago. Average hourly earnings rose six cents over the month to $7.73 in August 1983. This was forty cents higher than in the previous year. The average workweek at 40.1 hours had lengthened two-tenths of an hour over the month and 1.2 hours over the year. In the major metropolitan areas trends were mixed. Three had decreases in weekly earnings while six noted over-the-month increases.

CONSTRUCTION EMPLOYMENT CONTINUED TO RISE IN AUGUST. Since February, employment has improved every month and the addition of 1,200 over the month boosted employment to 111,500. This exceeds year-ago levels by 6,900. Even with interest rates creeping upward, the demand for new homes and industrial building continued to rise. Dry weather throughout the state permitted work to proceed at a good pace. The rise in the financial segment was tied to the construction industry, as most of the increase in this division was centered in mortgage companies and real estate agencies.

Current month's estimates are preliminary. Estimates include all full-time and part-time wage and salary workers who worked during or received pay for the pay period including the twelfth of the month. Self-employed persons are excluded. Employment series have been adjusted to first quarter 1982 benchmark levels.

NOTE: Detail may not add to totals because of rounding.

AUGUST NONFARM EMPLOYMENT IN VIRGINIA DECLINES

(continued from page 1)

BOTH WHOLESALE AND RETAIL TRADE ESTABLISHMENTS POSTED GAINS IN AUGUST WITH AN INCREASE OF 1,400 IN WORKERS OVER THE MONTH. Increases in wholesale trade were small and widespread. Department stores, specialty shops and restaurants were responsible for most of the August hirings. Retail sales slipped overall in August; however, if auto sales had been excluded, a rise in spending would have occurred. Stores that rely on tourism have found summer business generally good but not a banner year. Many firms in the services industry began to release summer help a little earlier this year and totals in this group moved downward. Layoffs were scattered throughout the industry. Increases in personnel in health care establishments cushioned some of the declines. Opposing trends prevailed in government. As the federal government released defense personnel, local school systems began recalling workers for the reopening of schools later in the month. Only a minus 200 was recorded for total government.

THE ALL URBAN CONSUMER PRICE INDEX (CPI-U) for August 1983 was 300.3 (1967=100). This was a 0.3 percent increase unadjusted and 0.4 percent increase seasonally adjusted. The yearly increase was 2.6 percent unadjusted. The Wage Earners and Clerical Workers Index (CPI-W) was 299.5 (1967=100) in August 1983 - up 0.4 percent unadjusted and 0.5 percent seasonally adjusted over July 1983. The yearly unadjusted increase was 2.4 percent.

If you have any questions, please call 804-786-2379. September 1983 data will be available October 25, 1983.

Current month's estimates are preliminary. Average hourly earnings are computed on a gross basis and are affected by such factors as premium pay for overtime work and shift differential, as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of average weekly hours and average hourly earnings.

Table C-2.

EXPLANATORY NOTES

This release presents and analyzes statistics from the Current Employment Statistics Survey. Data on nonagricultural payroll employment, hours and earnings are collected by the Virginia Department of Labor and Industry in cooperation with the U. S. Bureau of Labor Statistics, from payroll records of a sample of approximately 7,000 establishments. In most industries the sampling probabilities are based on the size of the establishment; most large establishments are therefore in the sample. Self-employed persons, domestic workers and others not on a regular civilian payroll are outside the scope of the survey because they are excluded from establishment records.

Definitions:

Employed persons are all persons who received pay (including holiday and sick pay) for any part of the payroll period including the 12th of the month. Persons holding more than one job are counted in each establishment which reports them. From a sample composed of establishments reporting for both the previous and the current months, the ratio of current employment to that of the previous month is computed. This is called a link relative. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these link relatives.

Production workers in manufacturing include blue-collar worker supervisors and all nonsupervisory workers closely associated with production operations.

Hours represent the average weekly hours of production or nonsupervisory workers for which pay was received and is different from standard or scheduled hours. Such factors as unpaid absenteeism, labor turnover, part-time work and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect changes in the workweek of component industries.

Earnings are the payments production or nonsupervisory workers receive during the survey period, including premium pay for overtime or late-shift work but excluding irregular bonuses and other special payments. Average hourly earnings are on a gross basis, reflecting not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. Shifts in the volume of employment between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Benchmark Adjustments. Employment estimates are compared periodically with comprehensive counts of employment which provide "benchmarks" for the various nonagricultural industries, and appropriate adjustments are made. The primary sources of benchmark information are employment data, by industry, compiled quarterly by the Virginia Employment Commission from reports of establishments covered under the unemployment insurance laws.

Reliability of employment estimates. The BLS establishment sample covers approximately 42.1 percent of the total employment for the state. Since small sampling and response errors cumulate over several months, there was a minus 1.4 percent adjustment in benchmark levels for the first quarter 1982 benchmarks.

Seasonal Adjustments. Nearly all economic phenomena are affected to some degree by seasonal variations. These are recurring, predictable events which are reported more or less regularly each year. The cumulative effects of these events are often large. Since seasonal variations tend to be large relative to the underlying cyclical trends, it is necessary to use seasonally adjusted data to interpret short-term economic developments. Seasonally adjusted estimates of total employment and average weekly hours of production workers in the manufacturing industies are published in this release for the State of Virginia. The seasonal adjustment methods used for these series are an adaptation to the standard ratio-to-moving average method, with a provision for moving "adjustment factors" to take account of changing seasonal patterns.

Labor force and unemployment estimates for the State and standard metropolitan statistical areas are developed by the Virginia Employment Commission under a Federal-State cooperative program. Estimates are derived from standardized procedures developed by the Bureau of Labor Statistics.

Explanatory Notes

EMPLOYMENT IN NONAGRICULTURAL INDUSTRIES ROSE 31,800 DURING SEPTEMBER 1983

NONAGRICULTURAL EMPLOYMENT ROSE TO 2,179,600 IN SEPTEMBER 1983--AN INCREASE OF 31,800 OVER THE MONTH AND AN OVER-THE-YEAR RISE OF 40,600. The recall of nonteaching personnel in schools, along with the settlement of the communication workers strike, accounted for the bulk of the over-the-month increases. Manufacturing also added to the uptrend. Seasonal pressures in services and construction pushed employment down in these divisions. With the exception of mining, all major industry segments are above year-ago levels of employment.

THE MANUFACTURING SECTOR CONTINUED TO SHOW IMPROVEMENT DURING SEPTEMBER. Both durable and nondurable goods producers had monthly increases. The return to work of communication equipment manufacturers who were away from their jobs in August, was a salient factor in the uptrend of persons on durable goods producers payrolls. The furniture industry also registered gains (+400) in September. Stimulation in the home building industry has prompted new orders for household furniture. Nondurable goods manufacturers' participation in the uptrend of employment was centered in the seasonal segments of food and tobacco. The effects of the summer drought are still being felt by these industries. Smaller than usual yields have been harvested; thus, fewer persons are being needed to process this year's crops of fruits, vegetables, and tobacco. Textiles and apparel producers used more workers this month. These increases were small and scattered within the two industries. All other monthly changes were also limited and widespread.

VIRGINIA'S 311,400 FACTORY PRODUCTION WORKERS EARNED AN AVERAGE WEEKLY EARNING OF $315.06 IN SEPTEMBER 1983. This was $5.52 more than last month and $27.16 more than a year ago. Average hourly earnings at $7.76 were up six cents over the month and 34 cents over the year. The average workweek at 40.6 hours rose four-tenths of an hour between August and September and was 1.8 hours longer than in September 1982. The September 1983 average workweek was the longest workweek recorded since the last quarter of 1978. A look at the metropolitan areas revealed longer workweeks during September in all but the Bristol and Charlottesville Areas.

SERVICES EMPLOYMENT DECLINED 3,300 BETWEEN MID-AUGUST AND MID-SEPTEMBER. This trend was normal for September. Even with warm weather lingering, many tourist-related businesses closed or reduced operations the first week of this month. Theme parks were open only on weekends after Labor Day. Hotels, motels, amusement centers, and museums reported reduced employment. Personal services, business services, and health services, while not generally considered tourist-related, also recorded downtrends. However, some increase was observed in private schools.

Table A-1.

ESTIMATED EMPLOYMENT IN NONAGRICULTURAL INDUSTRIES IN VIRGINIA

INDUSTRY GROUP	EMPLOYMENT IN THOUSANDS SEP. 1983	AUG. 1983	SEP. 1982	NET CHANGE FROM AUG. 1983	SEP. 1982

Current month's estimates are preliminary. Estimates include all full-time and part-time wage and salary workers who worked during or received pay for the pay period including the twelfth of the month. Self-employed persons are excluded. Employment series have been adjusted to first quarter 1982 benchmark levels.

NOTE: Detail may not add to totals because of rounding.

EMPLOYMENT IN NONAGRICULTURAL INDUSTRIES ROSE 31,800 DURING SEPTEMBER 1983

(continued from page 1)

THE CONSTRUCTION AND FINANCE DIVISIONS REPORTED REDUCTIONS IN FORCES OVER THE MONTH. While an August to September drop in employment is not unusual, the drop this year was much less severe than in previous years. Building continued at a good pace in many areas of the state. Although interest rates continued to rise and new home starts declined in September, the outlook for the construction industry has improved. Seasonal declines in real estate agencies accounted for much of finance's loss of workers. September's clear, warm weather was an aid to contractors but it was not the same for retailers. Interest in fall and winter clothing lagged on the extremely warm days of September. However, during the last quarter of the year sales are expected to rise as consumers will be purchasing for the coming holidays. Mining employment continued to remain below year-ago levels, despite a small over-the-month increase of 100 workers. The bright spot in transportation, communication and public utilities was the return to work of striking communication workers.

THE BUREAU OF LABOR STATISTICS' ALL URBAN CONSUMER PRICE INDEX for September 1983 was 301.8 (1967=100). This was a monthly rise of 0.5 percent and a yearly gain of 2.9 percent. The Urban Wage Earners and Clerical Workers Index rose 0.4 percent to 300.8 (1967=100). The over-the-year increase was 2.7 percent.

Index figures for October 1983 will be available on November 23, 1983 and may be obtained by calling (804) 786-4490.

Current month's estimates are preliminary. Average hourly earnings are computed on a gross basis and are affected by such factors as premium pay for overtime work and shift differential, as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of average weekly hours and average hourly earnings.

EXPLANATORY NOTES

This release presents and analyzes statistics from the Current Employment Statistics Survey. Data on nonagricultural payroll employment, hours and earnings are collected by the Virginia Department of Labor and Industry in cooperation with the U. S. Bureau of Labor Statistics, from payroll records of a sample of approximately 7,000 establishments. In most industries the sampling probabilities are based on the size of the establishment; most large establishments are therefore in the sample. Self-employed persons, domestic workers and others not on a regular civilian payroll are outside the scope of the survey because they are excluded from establishment records.

Definitions:

Employed persons are all persons who received pay (including holiday and sick pay) for any part of the payroll period including the 12th of the month. Persons holding more than one job are counted in each establishment which reports them. From a sample composed of establishments reporting for both the previous and the current months, the ratio of current employment to that of the previous month is computed. This is called a link relative. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these link relatives.

Production workers in manufacturing include blue-collar worker supervisors and all nonsupervisory workers closely associated with production operations.

Hours represent the average weekly hours of production or nonsupervisory workers for which pay was received and is different from standard or scheduled hours. Such factors as unpaid absenteeism, labor turnover, part-time work and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect changes in the workweek of component industries.

Earnings are the payments production or nonsupervisory workers receive during the survey period, including premium pay for overtime or late-shift work but excluding irregular bonuses and other special payments. Average hourly earnings are on a gross basis, reflecting not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. Shifts in the volume of employment between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Benchmark Adjustments. Employment estimates are compared periodically with comprehensive counts of employment which provide "benchmarks" for the various nonagricultural industries, and appropriate adjustments are made. The primary sources of benchmark information are employment data, by industry, compiled quarterly by the Virginia Employment Commission from reports of establishments covered under the unemployment insurance laws.

Reliability of employment estimates. The BLS establishment sample covers approximately 42.1 percent of the total employment for the state. Since small sampling and response errors cumulate over several months, there was a minus 1.4 percent adjustment in benchmark levels for the first quarter 1982 benchmarks.

Seasonal Adjustments. Nearly all economic phenomena are affected to some degree by seasonal variations. These are recurring, predictable events which are reported more or less regularly each year. The cumulative effects of these events are often large. Since seasonal variations tend to be large relative to the underlying cyclical trends, it is necessary to use seasonally adjusted data to interpret short-term economic developments. Seasonally adjusted estimates of total employment and average weekly hours of production workers in the manufacturing industies are published in this release for the State of Virginia. The seasonal adjustment methods used for these series are an adaptation to the standard ratio-to-moving average method, with a provision for moving "adjustment factors" to take account of changing seasonal patterns.

Labor force and unemployment estimates for the State and standard metropolitan statistical areas are developed by the Virginia Employment Commission under a Federal-State cooperative program. Estimates are derived from standardized procedures developed by the Bureau of Labor Statistics.
